

Part 4: Comparing TCP and UDP by filling in the following tables.

Task 1: Fill in the following table and provide reasons.

	TCP or UDP	Reasons
Reliability and Connection Establishment	TCP	TCP is connection-oriented and provides reliable data delivery using acknowledgments and retransmissions.
Data Integrity and Ordering	TCP	TCP ensures that data is delivered correctly and in the proper order.

Task 2: Identify the use Cases and Performance of TCP and UDP.

	TCP	UDP
Use cases	Web browsing, email, and file transfer	Streaming, VoIP, online gaming, and DNS
Performance	Slower due to connection establishment, acknowledgments, and reliability mechanisms	Faster with lower overhead because it does not establish a connection or guarantee delivery
